The question of whether to substitute a steam turbine for a steam engine of older type, and if so what should be the size in view of the probable future load, is a question that comes up for consideration only once in every few years. A new generator must be installed, because of an excessive, but short-time peak load. Great care and a wide knowledge of many things are required to tell whether it is best to install two smaller units or one large unit. Such questions do not present themselves often, but if a mistake is made when it comes time to decide them, considerable losses result. On the other hand, the ordinary detailed problems of day-to-day operation require constant attention, but...
