## A PRACTICAL TREATISE ON THE STRENGTH AND STIFFNESS OF TIMBER INTENDED AS A GUIDE FOR ENGINEERS, ARCHITECTS, CARPENTERS . TO WHICH IS ADDED AN AB

To read **A Practical Treatise on the Strength and Stiffness of Timber Intended as a Guide for Engineers, Architects, Carpenters . To Which Is Added an AB** PDF, make sure you refer to the hyperlink beneath and save the document or get access to additional information which might be related to **A PRACTICAL TREATISE ON THE STRENGTH AND STIFFNESS OF TIMBER INTENDED AS A GUIDE FOR ENGINEERS, ARCHITECTS, CARPENTERS . TO WHICH IS ADDED AN AB** book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 26 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1833 edition. Excerpt: . . . pounds, at a point 16 feet from one support, and 4 feet from the other; and half the weight of a beam of these dimensions is 141 pounds; therefore 3464--141 3323 pounds, the same as the load proposed. Problem XX. In the equation  $mnw = 3ld^3$  there are given the diameter  $d$ , the length of bearing  $l$ , and the load  $w$ ; to find  $m$  and  $n$ , the segments of the length separately. Divide both sides of the equation by the given load, and we get  $mn$  by the nature of the question. Hence, by the rule at Problem VII. , we obtain for the segments of the length, the following expressions, viz. where  $m$  is the greater and  $n$  the lesser segment; from which the following practical rule is derived. Rule 36. Multiply 125 times the length of bearing in feet, by the cube of the diameter in inches; divide the product by the given load, and subtract the quotient from the square of the length; then, to or from the length, add or subtract the square root of the remainder, and half the sum, or half the difference, will give the greater or lesser segment accordingly. Example 26. A cylindrical beam of oak 7 inches in diameter, and 20 feet in length, is found to sustain a load of 3323 pounds, including the effect produced by its own weight; at what point of the length is the load applied Here, by the...
